

Belt Conveyors

Custom engineered to your specifications and processing needs. Our belt conveyors can be constructed using various belting options including:

- wire
- modular
- flat
- flighted
- tab chain
- drag flight (chain)
- monolithic (positive drive)
- 90 deg transfer (packaging)
- roller top

We work with many belting manufacturers and can either incorporate one of your choice or recommend the conveyor belting choice best for your application. Many geometric designs are available including incline, decline, integral hopper, and z-frame. These conveyors can be outfitted with metal detectors or spray cabinets as well.

Our engineers will work with you to determine the design parameters and provide a solution to suit your specific conveyance and processing needs.

Our designs feature stainless steel construction with stainless steel washdown duty motors, gearboxes, and bearings and satisfy the stringent sanitary standards required in the food processing industry.

Monolithic belt conveyor shown with:

- reversible center drive
- quick release belt take-up
- belt lifters
- leveling feet
- stainless steel gearbox and motor
- drip pans
- open section members for cleanability
